Saviour Traffic Cone

Traffic cones are usually cone-shaped markers that are placed on roads or footpaths to temporarily redirect traffic in a safe manner. They are often used to create separation or merge lines during road construction projects or automobile accidents, although heavier, more permanent markers or signs are used if the diversion is to stay in place for a long period of time. Mostly these are to be fitted with reflective white bands to increase night-time visibility. Reflective collars, white strips made from white reflective plastic, slip over cones snugly, and tape or adhesive can be used to permanently attach the collars to the cones.

TECHNICAL SPECIFICATION		KEY FEATURES
Design	Single-piece, wrap-around design	<ul style="list-style-type: none">Creating and maintaining high standard of traffic management.Minimizing the occurrence of road accidents.Facilitate smooth movement of vehicle in highly populated areas.Easily be carried
